

FLEX-Line

Efficient, flexible, and durable – the perfect solution for professional wooden window production

A lightweight, precise system with an aluminium base body and flexibly usable sanding segments.

Ideal for different profile shapes and individual requirements.

Quick and easy conversion for new sanding profiles.

The entire tool concept is consistently designed for lightweight and is therefore suitable for any CNC machine.

Your advantages:

- Flexible profile system
- Stable and lightweight aluminium base body
- Suitable for any CNC machine
- Low weight
- Usable up to 3,000 rpm (also suitable for spindle moulders)
- High precision
- Replaceable flank protection
- Modular height extension possible

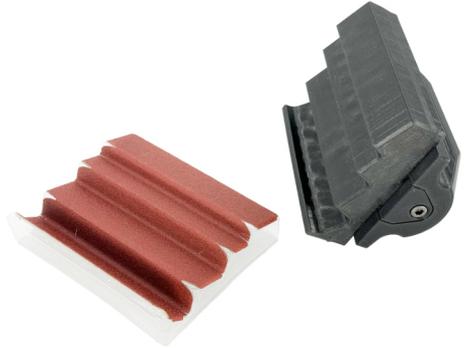

Hand Sander PRO

Designed for sanding individual and complex profiles

The hand sander is designed for profiled surfaces, edges, and decorative grooves. Thanks to its full-surface material removal, it can sand even difficult profiles effectively. The profiled sanding segment fits precisely and ensures a homogeneous surface – ideal for basic, intermediate, and fine sanding. It can also be used for various finishing tasks.

The entire contour is processed in a single operation – saving valuable time in production.

The sanding segment can be changed quickly and easily, and can be reordered in various grit sizes.

Your advantages:

- Flexible profile system
- Exact profile geometry according to drawing
- High precision
- Ergonomic and comfortable to hold
- Suitable for any sanding stage in any grit size
- Replaceable sanding segments
